Week 1 - Web Presentation

Overall, I enjoyed working with the slidy template I found that it was both intuitive and simple but also had a lot of depth especially with respect to the included 'js' and 'css' files. There is certainly a lot to slidy that I still have to learn, I do not yet know the purpose of a lot of the 'id' and 'class' tags. Some seemed to refer to the css file while others seemed to be arbitrary. Also, I did modify any of the javascript though I did take a look at it, since any attempt produced undesirable results. I used the 'vim' text editor and the bash shell for most of this project and used firefox to view the html files.
